(Part 1) must be seen first to flow. Part 2 of The holographic universe proves that the physical world we believe is real is in fact illusion. Energy fields are decoded by our brains into a 3D picture, to give the illusion of a physical world.

The Holographic Universe is a New Age book by Michael Talbot that explores the idea that the entire universe is a hologram. After examining the work of physicist David Bohm and neurophysiologist Karl Pribram, both of whom independently arrived at holographic theories or models of the universe, the book then argues that a holographic model could explain various paranormal and anomalous phenomena, and provide a basis for mystical experience.
